

Cylinder with Lock

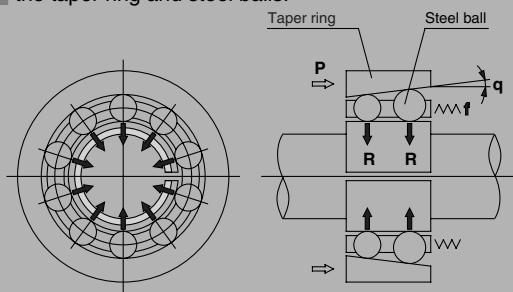

Series CNA

ø40, ø50, ø63, ø80, ø100

Suitable for intermediate stops, emergency stops and drop prevention

Simple construction

A force magnifying mechanism is employed based on the wedge effect of the taper ring and steel balls.

High locking efficiency

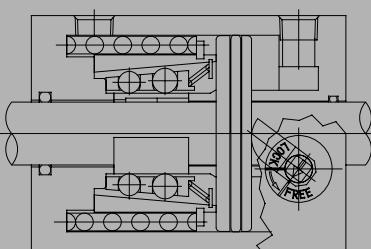

Greater locking efficiency as well as stable locking and unlocking operation has been achieved by arranging a large number of steel ball bearings in circular rows. (Unlocking pressure of 0.25 MPa 0.05 MPa lower than conventional SMC products) In addition, both alignability and stable locking force with respect to piston rod eccentricity are obtained by allowing the taper ring to float.

High reliability and stable holding force

Outstanding durability and stable holding force are maintained by the use of a brake shoe having superior wear resistance, which has also been substantially lengthened (double the conventional SMC product).

Maximum piston speed: 1000 mm/s

It can be used at 50 to 1000 mm/s provided that it is within the allowable kinetic energy range.

Manual override for unlocking

Even if the air supply is blocked or exhausted, lock release is possible. The fail safe mechanism locks again when the manual override is released.

Design minimizes the influences of unlocking air quality

A construction which is strong against moisture and drainage in the compressed air has been realized by separating the locking mechanism and the unlocking chamber.

Can be locked in both directions

An equal holding force can be obtained on either reciprocating stroke of the cylinder.

Compact lock unit saves space

The lock unit is extremely compact, without a large overhang.

■ Series Variations

Series	Action	Type	Standard variations		Locking method	Bore size (mm)	Standard stroke (mm)
			Auto switch built-in magnet	With rod boot	Spring locking		
Cylinder with lock Series CNA	Double acting	Single rod Series CNA				40	25 to 500
		Double rod Series CNAW				50	25 to 600
						63	
						80	25 to 700
						100

Series CNA

Specific Product Precautions 1

Be sure to read before handling.

Design of Equipment and Machinery

⚠ Warning

1. Construct so that the human body will not come into direct contact with driven objects or the moving parts of locking cylinders.

Devise a safe structure by attaching protective covers that prevent direct contact with the human body, or in cases where there is a danger of contact, provide sensors or other devices to perform an emergency stop, etc., before contact occurs.

2. Use a balance circuit, taking cylinder lurching into consideration.

In cases such as an intermediate stop, where a lock is operated at a desired position within the stroke and air pressure is applied from only one side of the cylinder, the piston will lurch at high speed when the lock is released. In such situations, there is a danger of causing human injury by having hands or feet, etc. caught, and also a danger for causing damage to the equipment. In order to prevent this lurching, a balance circuit such as the recommended pneumatic circuits (page 9-7-3) should be used.

Selection

⚠ Warning

1. When in the locked state, do not apply a load accompanied by an impact shock, strong vibration or turning force, etc.

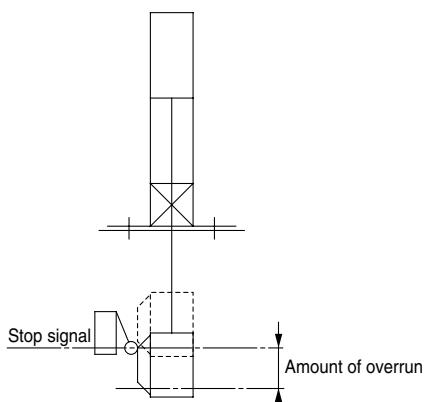

Use caution, because an external action such as an impacting load, strong vibration or turning force, may damage the locking mechanism or reduce its life.

2. Consider stopping accuracy and the amount of over-run when an intermediate stop is performed.

Due to the nature of a mechanical lock, there is a momentary lag with respect to the stop signal, and a time delay occurs before stopping. The cylinder stroke resulting from this delay is the overrun amount. The difference between the maximum and minimum overrun amounts is the stopping accuracy.

- Place a limit switch before the desired stopping position, at a distance equal to the overrun amount.
- The limit switch must have a detection length (dog length) of the overrun amount + Ø.
- For SMC's auto switches, the operating range is between 8 and 14 mm. (It varies depending on a switch model.) When the overrun amount exceeds this range, self-holding of the contact should be performed at the switch load side.

* For stopping accuracy, refer to page 9-7-9.

Selection

⚠ Warning

3. In order to further improve stopping accuracy, the time from the stop signal to the operation of the lock should be shortened as much as possible.

To accomplish this, use a device such as a highly responsive electric control circuit or solenoid valve driven by direct current, and place the solenoid valve as close as possible to the cylinder.

4. Note that the stopping accuracy will be influenced by changes in piston speed.

When piston speed changes during the course of the cylinder stroke due to variations in the load or disturbances, etc., the dispersion of stopping positions will increase. Therefore, consideration should be given to establishing a standard speed for the piston just before it reaches the stopping position.

Moreover, the dispersion of stopping positions will increase during the cushioned portion of the stroke and during the accelerating portion of the stroke after the start of operation, due to the large changes in piston speed.

Mounting

⚠ Warning

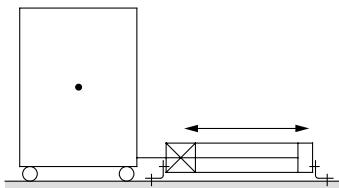

1. Be certain to connect the rod end to the load with the lock released.

If connected in the locked state, a load greater than the turning force or holding force, etc. may operate on the piston rod and cause damage to the lock mechanism. Series CNA is equipped with an emergency unlocking mechanism, however, when connecting the rod end to the load this should be done with the lock released. This can be accomplished by simply connecting an air line to the unlocking port and supplying air pressure of 0.25 MPa or more.

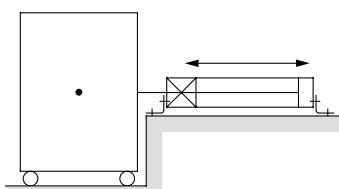

⚠ Caution

1. Do not apply offset loads to the piston rod.

Particular care should be taken to match the load's center of gravity with the center of the cylinder shaft. When there is a large discrepancy, the piston rod may be subjected to uneven wear or damage due to the inertial moment during locking stops.

X Load center of gravity and cylinder shaft center are not matched.

○ Load center of gravity and cylinder shaft center are matched.

Note) Can be used if all of the generated moment is absorbed by an effective guide.

Series CNA

Specific Product Precautions 2

Be sure to read before handling.

Mounting

⚠ Caution

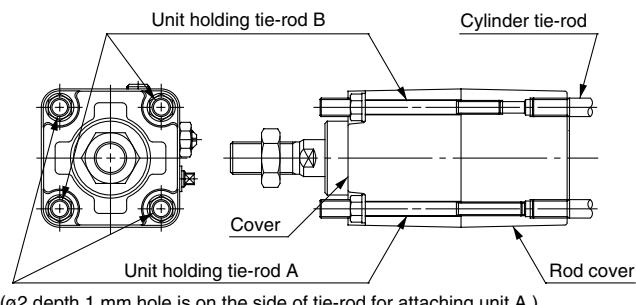

2. Caution on using the basic style or replacing the support bracket.

The lock unit and cylinder rod cover are assembled as shown in the figure below. For this reason, it cannot be installed as in the case of common air cylinders, by using the basic type and screwing the cylinder tie-rods directly to machinery.

Furthermore, when replacing mounting brackets, the unit holding tie-rods may get loosen. Tighten them once again in such a case.

Use socket wrench for replacing the mounting bracket or tightening tie-rod for unit mounting.

Bore size (mm)	Mounting bracket nut			Unit holding tie-rod	
	Nut	Width across flats	Socket	Width across flats	Socket
40	JIS B 1181 Class 3 M8 x 1.25	13	JIS B 4636 2 point angle socket 13	10	JIS B 4636 2 point angle socket 10
				13	JIS B 4636 2 point angle socket 13
63	JIS B 1181 Class 3 M10 x 1.25	17	JIS B 4636 2 point angle socket 17	13	JIS B 4636 2 point angle socket 13
80, 100	JIS B 1181 Class 3 M12 x 1.25	19	JIS B 4636 2 point angle socket 19	17	JIS B 4636 2 point angle socket 17

(φ2 depth 1 mm hole is on the side of tie-rod for attaching unit A.)

Adjustment

⚠ Caution

1. Adjust air balance for cylinder. Balance the load by adjusting the air pressure in the cylinder rod side and head side after the lock is released when the load is mounted on cylinder. When you have this air balance, cylinder ejection at lock release can be avoided.

2. Adjust mounting position for detection area of auto switch etc. When intermediate stop is done, adjust the mounting position for detection stop is done, adjust the mounting position for detection area of auto switch etc., with consideration of overrun distance to required stop position.

Pneumatic Circuit

⚠ Warning

1. Be certain to use an pneumatic circuit which will apply balancing pressure to both sides of the piston when in a locked stop.

In order to prevent cylinder lurching after a lock stop, when restarting or when manually unlocking, a circuit should be used to which will apply balancing pressure to both sides of the piston, thereby canceling the force generated by the load in the direction of piston movement.

2. Use a solenoid valve for unlocking which has a large effective area, as a rule 50% or more of the effective area of the cylinder drive solenoid valve.

The larger the effective area is, the shorter the locking time will be (the overrun amount will be shorter), and stopping accuracy will be improved.

3. Place the solenoid valve for unlocking close to the cylinder, and no farther than the cylinder drive solenoid valve.

The shorter the distance from the cylinder (the shorter the piping), the shorter the overrun amount will be, and stopping accuracy will be improved.

4. Allow at least 0.5 seconds from a locked stop (intermediate stop of the cylinder) until release of the lock.

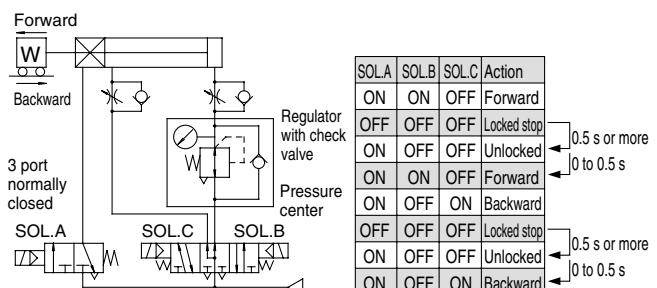

When the locked stop time is too short, the piston rod (and load) may lurch at a speed greater than the control speed of the speed controller.

5. When restarting, control the switching signal for the unlocking solenoid valve so that it acts before or at the same time as the cylinder drive solenoid valve.

If the signal is delayed, the piston rod (and load) may lurch at a speed greater than the control speed of the speed controller.

6. Basic circuit

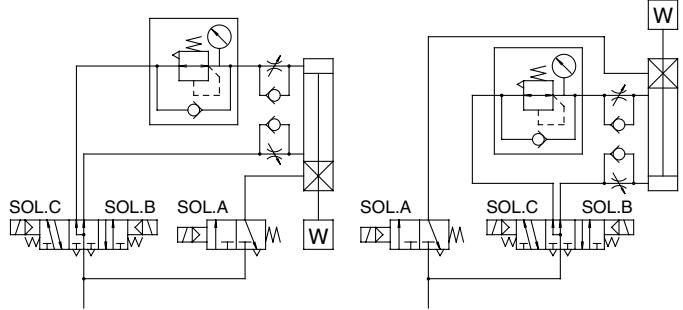

1) [Horizontal]

2) [Vertical]

[Load in the direction of rod extension]

[Load in the direction of rod retraction]

Specific Product Precautions 3

Be sure to read before handling.

Pneumatic Circuit

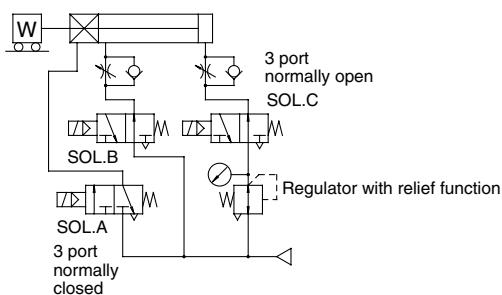

⚠ Caution

- 3 position pressure center solenoid valve and regulator with check valve can be replaced with two 3 port normally open valves and a regulator with relief function.

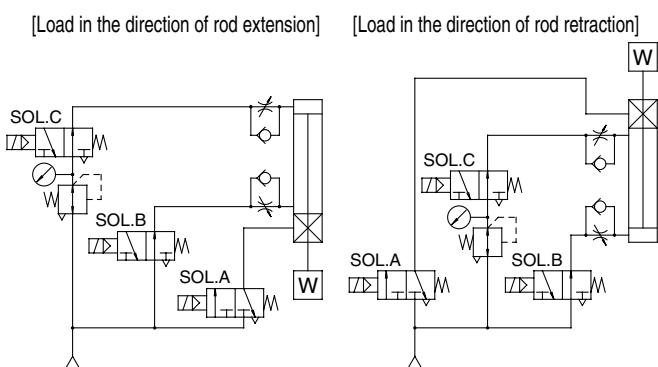

[Example]

1) [Horizontal]

2) [Vertical]

Manually Unlocking

⚠ Caution

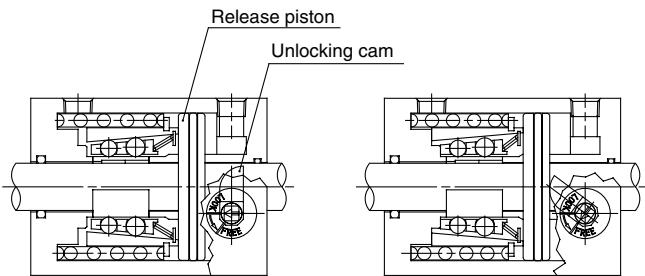

- Lock release manual override on Series CNA is only for emergencies.**

During an emergency when the air supply is cut off, it is used to alleviate a problem by forcibly pushing the release piston back to release the lock.

However, take note that the sliding resistance of the piston rod will be high compared to unlocking with air pressure.

- When installing into equipment or machinery, etc., in cases where it will be necessary to hold an unlocked condition for an extended time, air pressure of 0.25 MPa or more should be applied to the unlocking port.**

- Do not turn the unlocking cam (the arrow (←) on the unlocking cam head) past the FREE position. If it is turned too far there is a danger of damaging the unlocking cam.**

Locked state

Manually unlocked state

[Principle]

If the unlocking cam is turned counter clockwise with a tool such as an adjustable angle wrench, the release piston is pushed back and the lock is released. Since the lever will return to its original position when released and become locked again, it should be held in this position for as long as unlocking is needed.

Series CNA

Specific Product Precautions 4

Be sure to read before handling.

Maintenance

⚠ Caution

1. Replacement of lock unit for Series CNA is possible. To order Series CNA lock units for maintenance, use the order numbers given in the table below.

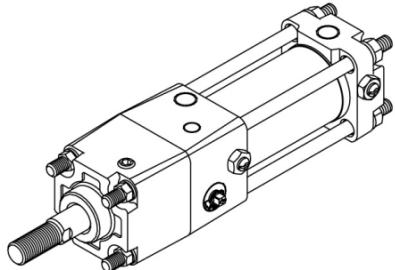

Bore size (mm)	Lock unit part no.
40	CNA 40D-UA
50	CNA 50D-UA
63	CNA 63D-UA
80	CNA 80D-UA
100	CNA100D-UA

* But, suffix "L" to the end of part number for 1001 stroke or more on C□DNAF50 to 100.
(Example: CNA100D-UAL)

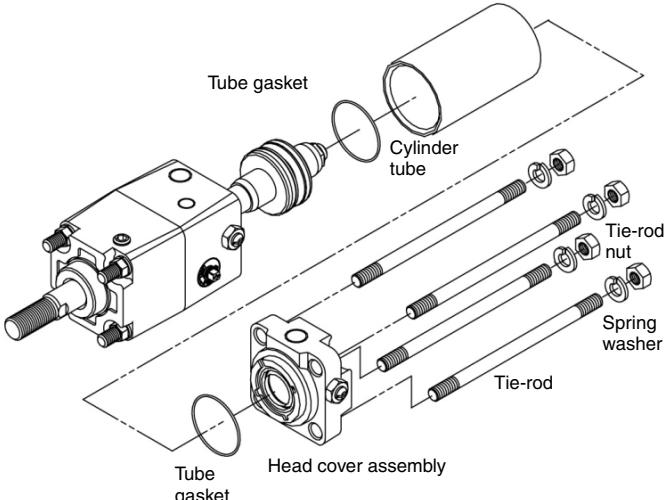

2. How to replace lock unit

- 1) Loosen the tie-rod nuts (4 pcs.) on the cylinder head cover side by using a socket wrench.
For the applicable socket, refer to the table below.

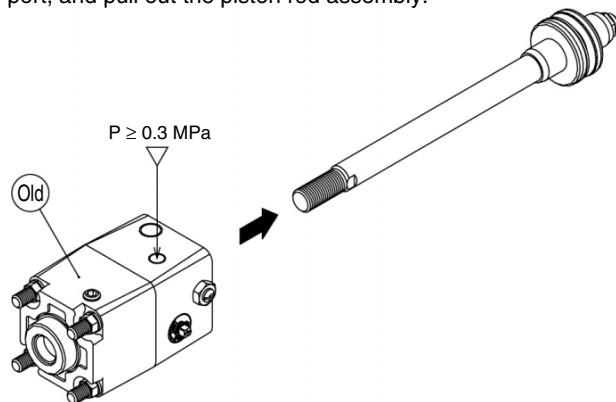

Bore size (mm)	Nut	Width across flats dimension	Socket
40, 50	JIS B 1181 Class 2 M8 x 1.25	13	JIS B 4636 + 2 point angle socket 13
63	JIS B 1181 Class 2 M10 x 1.25	17	JIS B 4636 + 2 point angle socket 17
80, 100	JIS B 1181 Class 2 M12 x 1.75	19	JIS B 4636 + 2 point angle socket 19

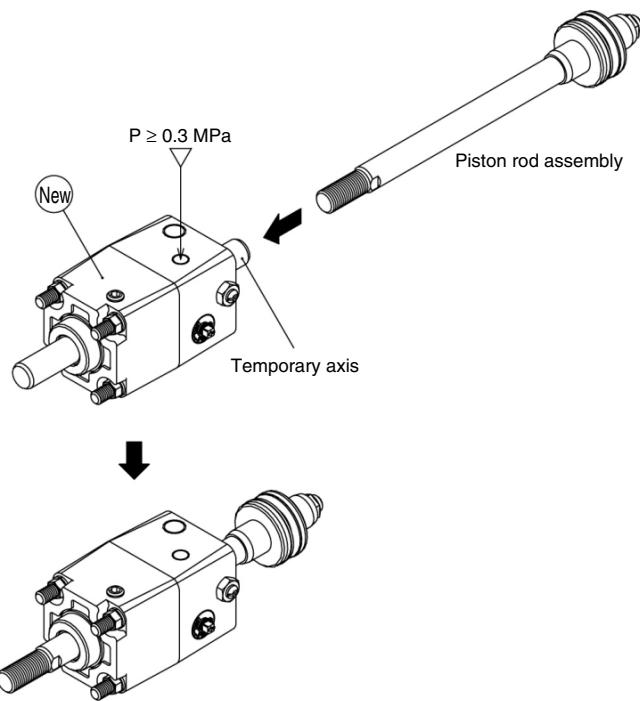

- 2) Remove the tie-rods, head cover and cylinder tube.

- 3) Apply 0.3 MPa or more of compressed air to the unlocking port, and pull out the piston rod assembly.

- 4) Similarly, apply 0.3 MPa or more of compressed air to the unlocking port of the new lock unit, and replace the new lock unit's temporary axis with the previous piston rod assembly.

- 5) Reassemble in reverse order from steps 2) and 1).

Model Selection

Precautions on Model Selection

⚠ Caution

- In order that the originally selected maximum speed is not exceeded, be certain to use a speed controller to adjust the total movement distance of the load so that movement takes place in no less than the applicable movement time. The movement time is the time that is necessary for the load to travel the total movement distance from the start without any intermediate stops.
- In cases where the cylinder stroke and the movement distance of the load are different (double speed mechanism, etc.), use the movement distance of the load for selection purposes.

Example)

Selection Example

- Load weight: $m = 50 \text{ kg}$
- Movement distance: $st = 500 \text{ mm}$
- Movement time: $t = 2 \text{ s}$
- Load condition: Vertical downward = Load in direction of rod extension
- Operating pressure: $P = 0.4 \text{ MPa}$

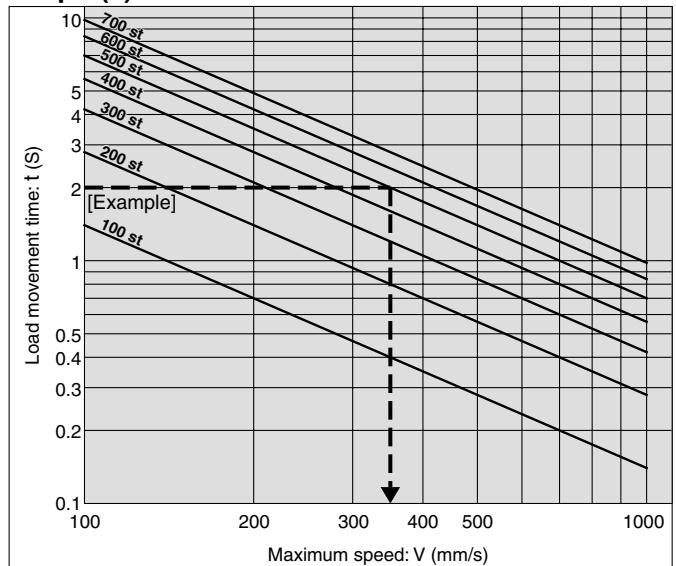

Step (1): From graph (1) find the maximum movement speed of the load.
 \therefore Maximum speed $V \approx 350 \text{ mm/s}$

Step (2): Select graph (6) based upon the load conditions and operating pressure, and then from the intersection of the maximum speed $V = 350 \text{ mm/s}$ found in Step (1), and the load weight $m = 50 \text{ kg}$.
 $\therefore \phi 63 \rightarrow$ Decided the tube I.D. CNA63 or more.

Step (1) Find the maximum load speed V.

Find the maximum load speed: V (mm/s) from the load movement time: t (s) and the movement distance: st (mm).

Graph (1)

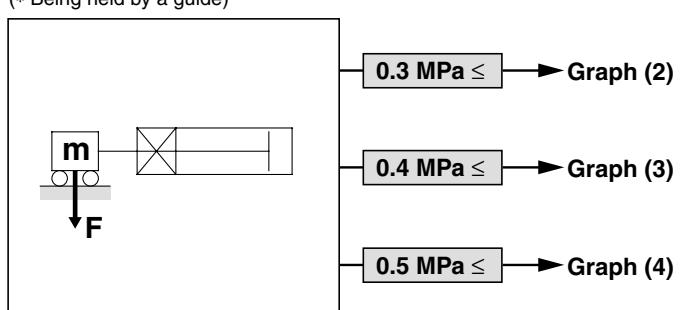

Step (2) Find the bore size.

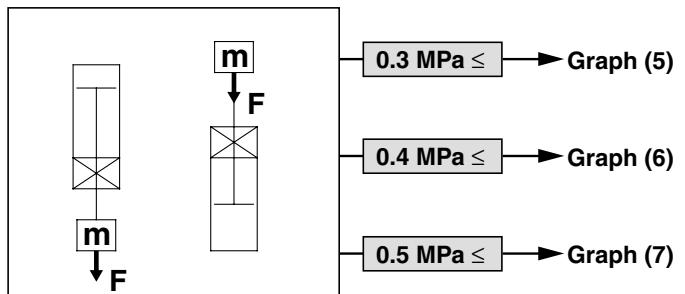

Select a graph based upon the load condition and operating pressure, and then find the point of intersection for the maximum speed found in Step (1) and the load weight. Select the bore size on the line above the point of intersection.

Load Condition

Load in the direction at the right angle to rod
(* Being held by a guide)

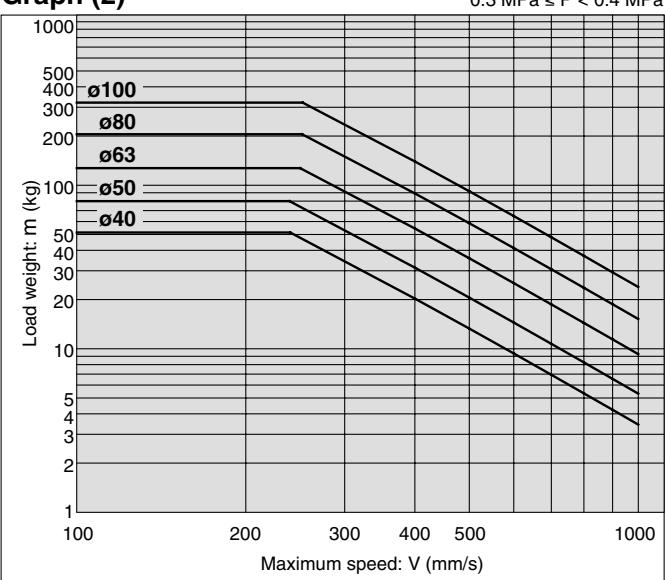

Load in the direction of rod extension
Load in the direction of rod retraction

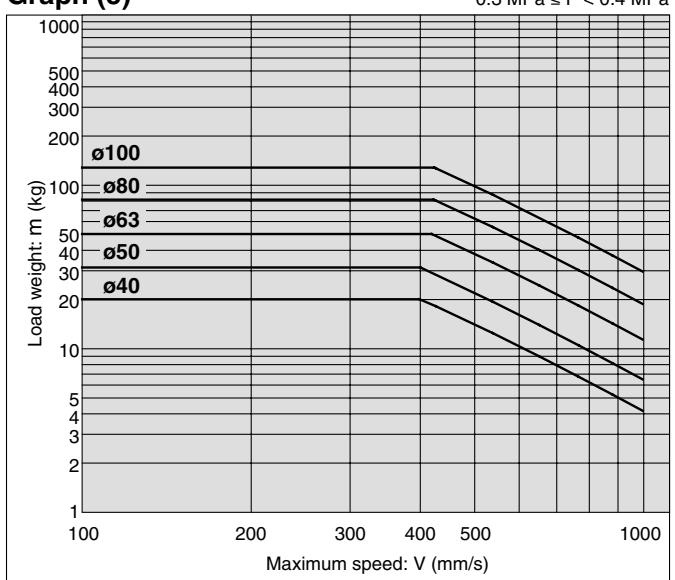

Selection Graph

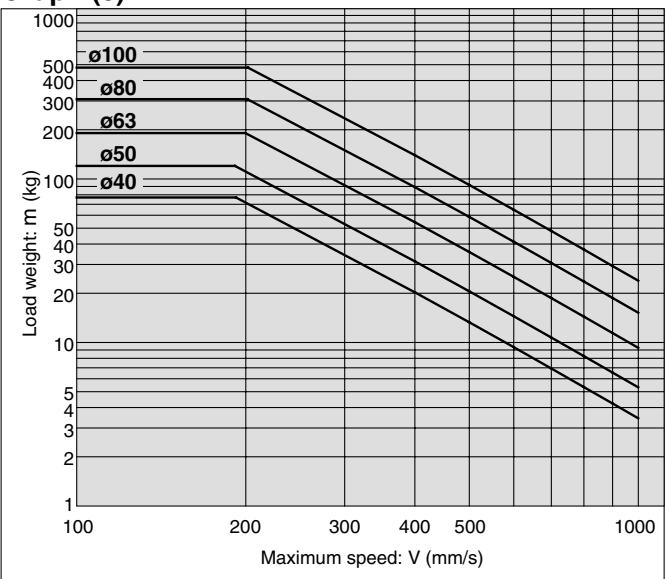

Graph (2)

Cylinder with Lock

Double Acting, Single Rod

Series CNA

ø40, ø50, ø63, ø80, ø100

How to Order

Built-in Magnet Cylinder Model

In the case of built-in magnet without auto switch, the symbol for auto switch is "Nil". (Example) CDNALN40-100-D

Applicable Auto Switch

(Refer to page 9-15-1 for further information on auto switches.)

Type	Special function	Electrical entry	Indicator light	Wiring (Output)	Load voltage		Auto switch model		Lead wire length(m)*			Pre-wire connector	Applicable load

* Lead wire length symbols: 0.5 m.....Nil (Example) A54
3 m.....L (Example) A54L
5 m.....Z (Example) A54Z

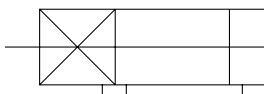

* Solid state switches marked with "○" are produced upon receipt of order.
• Since there are other applicable auto switches than listed, refer to page 9-7-23 for details.
• For details about auto switches with pre-wire connector, refer to page 9-15-66.

Cylinder with Lock Double Acting, Single Rod Series CNA

JIS Symbol

Double acting,
Single rod

Made to Order Specifications (For details, refer to page 9-16-1.)

Symbol	Specification
-XA□	Change of rod end shape
-XC3	Special port location
-XC11	Dual stroke cylinder/Single rod type
-XC14	Change of trunnion bracket mounting position
-XC35	With coil scraper

Specifications

Bore size (mm)	40, 50, 63, 80, 100
Fluid	Air
Type	Non-lube
Action	Double acting
Lock operation	Spring locking
Proof pressure	1.5 MPa
Max. operating pressure	1.0 MPa
Max. operating pressure	0.08 MPa
Piston speed	50 to 1000 mm/s *
Ambient and fluid temperature	Without auto switch: -10 to 70°C (No freezing) With auto switch: -10 to 60°C (No freezing)
Cushion	Air cushion
Stroke length tolerance	Up to 250: $^{+1.0}_0$, 251 to 1000: $^{+1.4}_0$, 1001 to 1500: $^{+1.8}_0$
Mounting	Basic style, Axial foot style, Rod side flange style, Head side flange style, Single clevis style, Double clevis style, Center trunnion style

* Load limits exist depending upon piston speed when locked, mounting direction and operating pressure.

ø50.....D-A3□C-5, ø80.....D-A3□C-8

To order the mounting brackets separately, use the part number shown above.

Construction Principle

Spring locking (Exhaust locking)

The spring force which acts upon the taper ring is magnified by a wedge effect, and is conveyed to all of the numerous steel balls which are arranged in two circles. These act on the brake shoe holder and brake, which locks the piston rod by tightening against it with a large force.

Unlocking is accomplished when air pressure is supplied to the unlocking port. The release piston and taper ring oppose the spring force, moving to the right side, and the ball retainer strikes the cover section A. The braking force is released as the steel balls are removed from the taper ring by the ball retainer.

Component Parts

No.	Description	Material	Note
①	Rod cover	Aluminum alloy	Black painted after hard anodized
②	Head cover	Aluminum alloy	Black painted
③	Cover	Aluminum alloy	Black painted after hard anodized
④	Cylinder tube	Aluminum alloy	Hard anodized
⑤	Piston rod	Carbon steel	Hard chrome plated
⑥	Piston	Aluminum alloy	Chromated
⑦	Taper ring	Carbon steel	Heat treated
⑧	Ball retainer	Special resin	
⑨	Piston guide	Carbon steel	Zinc chromated
⑩	Brake shoe holder	Special steel	Heat treated
⑪	Release piston	ø40	Aluminum alloy
		ø50	
		ø63	
		ø80	Carbon steel
		ø100	
⑫	Release piston bushing	Steel + Special resin	Hard anodized
⑬	Unlocking cam	Chromium molybdenum steel	Zinc chromated
⑭	Washer	Carbon steel	Black zinc chromated
⑮	Retainer pre-load spring	Steel wire	Zinc chromated
⑯	Brake spring	Steel wire	Zinc chromated
⑰	Clip A	Stainless steel	
⑱	Clip B	Stainless steel	
⑲	Steel ball A	Carbon steel	
⑳	Steel ball B	Carbon steel	
㉑	Tooth ring	Stainless steel	
㉒	Bumper	Polyurethane rubber	
㉓	Type C retaining ring for unlocking cam shaft	Carbon steel	
㉔	Type C retaining ring for taper ring	Carbon steel	
㉕	Brake shoe	Special friction material	
㉖	Unit holding tie-rod A	Carbon steel	Chromated
㉗	Unit holding tie-rod B	Carbon steel	Chromated
㉘	Tie-rod	Carbon steel	Chromated
㉙	Bushing	Lead-bronze casted	
㉚	Cushion ring A	Rolled steel plate	Zinc chromated

No.	Description	Material	Note
㉛	Cushion ring B	Rolled steel plate	Zinc chromated
㉜	Cushion valve	Rolled steel plate	Electroless nickel plated
㉝	Wear ring	Special resin	
㉞	Hexagon socket head plug	Chromium molybdenum steel	Black zinc chromated
㉟	Element	Bronze	
㉟	Piston nut	Rolled steel plate	Zinc chromated
㉟	Tie-rod nut	Carbon steel	Black zinc chromated
㉟	Lock nut	Carbon steel	Nickel plated
㉟	Rod end nut	Carbon steel	Nickel plated
㉟	Spring washer	Steel wire	Black zinc chromated
㉟	Spring washer	Steel wire	Black zinc chromated
㉟	Spring washer	Steel wire	Black zinc chromated
㉟	Piston seal	NBR	
㉟	Rod seal A	NBR	
㉟	Rod seal B	NBR	
㉟	Release piston seal	NBR	
㉟	Cushion seal	NBR	
㉟	Cushion valve seal	NBR	
㉟	Tube gasket	NBR	
㉟	Piston gasket	NBR	
㉟	Piston guide gasket	NBR	
㉟	Unlocking cam gasket	NBR	
㉟	O-ring	NBR	

Replacement Parts: Seal Kit

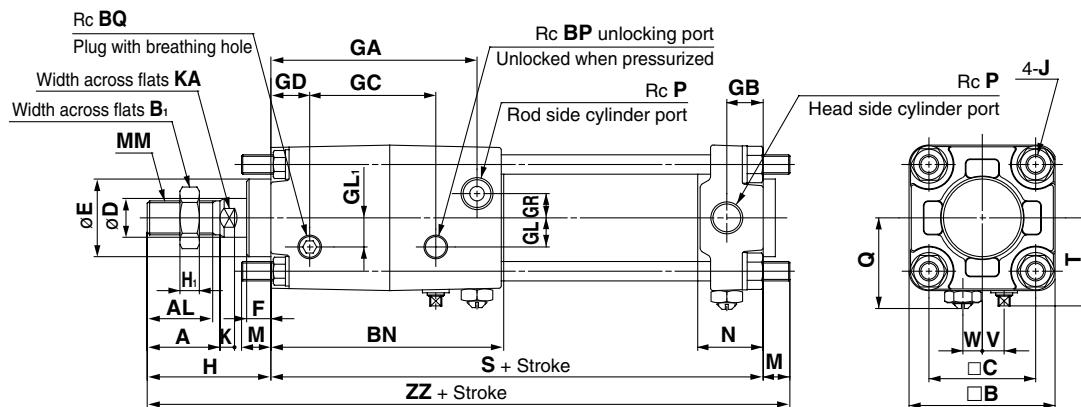

Bore size (mm)	Kit no.	Content
40	CA1N 40A-PS	Including no. ㉛, ㉜, ㉝ and ㉟.
50	CA1N 50A-PS	
63	CA1N 63A-PS	
80	CA1N 80A-PS	
100	CA1N100A-PS	

* Since the lock section for Series CNA is normally replaced as a unit, kits are for the cylinder section only. These can be ordered using the order number for each bore size.

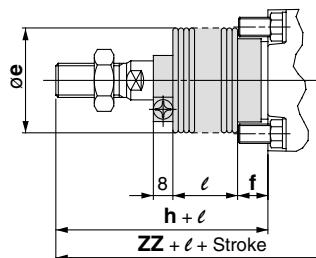

Cylinder with Lock Double Acting, Single Rod Series CNA

Data

The diagram illustrates the cylinder assembly with various dimensions labeled:

- Rc BQ**: Plug with breathing hole.
- Rc BP**: Unlocked when pressurized.
- Rc P**: Rod side cylinder port.
- Rc P**: Head side cylinder port.
- With rod boot**: Shows the cylinder with a rod boot installed.
- Width across flats KA**, **Width across flats B₁**: Width dimensions across the cylinder body.
- MM**: Distance from the rod end to the cylinder body.
- ØD**: Bore diameter.
- H₁**: Total height of the cylinder.
- AL**: Stroke length.
- A**: Rod end distance.
- K**: Distance from the rod end to the cylinder body.
- F**: Distance from the rod end to the rod boot.
- BN**: Total cylinder length.
- S + Stroke**: Total cylinder length including stroke.
- Z + Stroke**: Total cylinder length including stroke.
- ZZ + Stroke**: Total cylinder length including stroke.
- GB**: Head side cylinder port.
- ØCD H10**: Head side cylinder port diameter.
- N**: Head side cylinder port distance.
- U**: Head side cylinder port distance.
- L**: Head side cylinder port distance.
- RR**: Head side cylinder port.
- VW**: Head side cylinder port distance.
- T**: Head side cylinder port distance.
- CX**: Head side cylinder port distance.
- Q**: Head side cylinder port distance.
- J**: Head side cylinder port distance.
- 4-J**: Head side cylinder port distance.

Data

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted.

For detailed specifications, refer to page 9-15-1.

Type	Model	Electrical entry (Fetching direction)	Features
Read switch	D-A53/A56	Grommet (In-line)	—
	D-A64/A67		Without indicator light
	D-Z80		
Solid state switch	D-F59/F5P/J59	Grommet (In-line)	—
	D-F59W/F5PW/J59W		2-color indication type
	D-F5BAL		2-color indication type, Water resistant
	D-F5NTL		With timer
	D-G5NTL	Grommet (Perpendicular)	—
	D-Y69A/Y69B/Y7PV		2-color indication type
	D-Y7NWV/Y7PWV/Y7BWV		

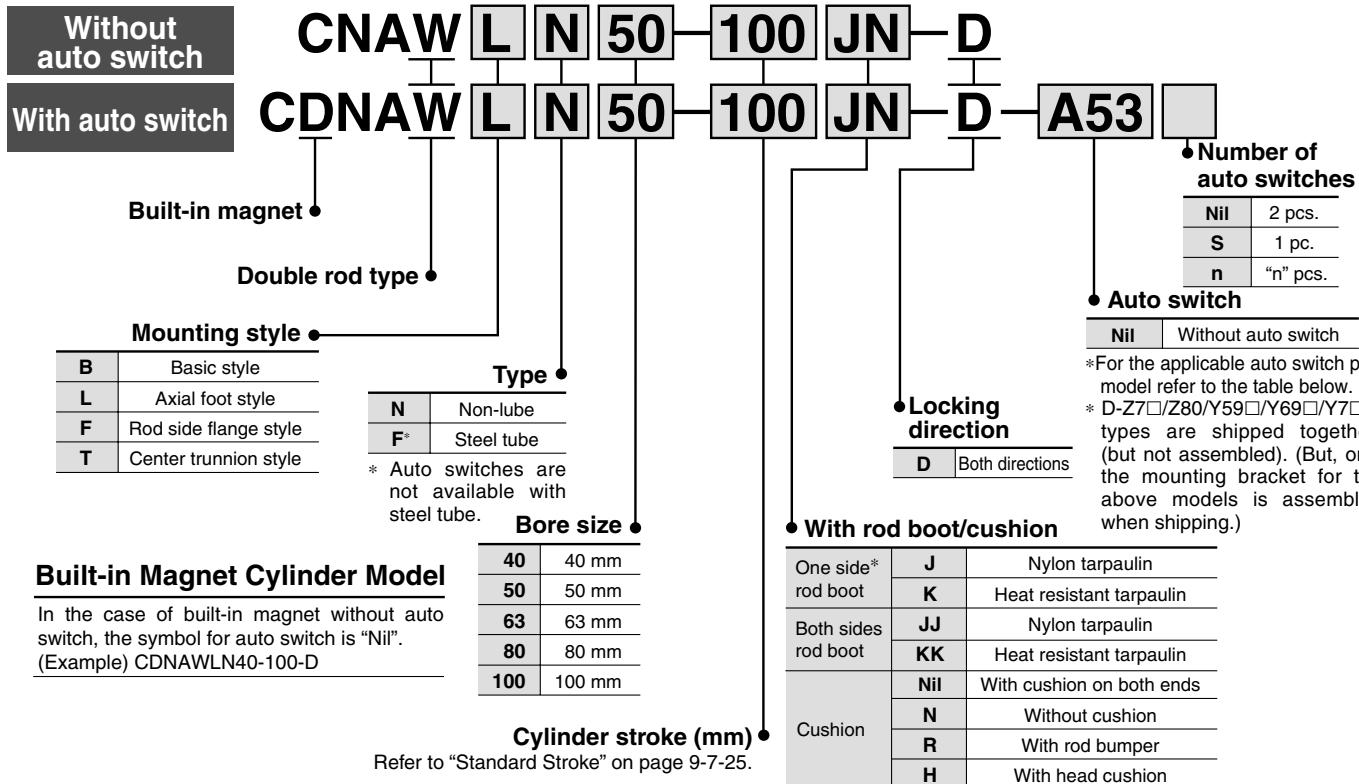

* With pre-wire connector is available for solid state auto switches. For details, refer to page 9-15-66.

* Normally closed (NC = b contact), solid state switch (D-Y7G/Y7H type) are also available. For details, refer to page 9-15-40.

Cylinder with Lock Double Acting, Double Rod Series CNAW

ø40, ø50, ø63, ø80, ø100

How to Order

Built-in Magnet Cylinder Model

In the case of built-in magnet without auto switch, the symbol for auto switch is "Nil".
(Example) CDNAWLNLN40-100-D

Applicable Auto Switch

Refer to page 9-15-1 for further information on auto switches.

Type	Special function	Electrical entry	Indicator light	Wiring (Output)	Load voltage		Auto switch model		Lead wire length (m)*			Pre-wire connector	Applicable load		
					DC	AC	Tie-rod mounting	Band mounting	0.5 (Nil)	3 (L)	5 (Z)				
Reed switch	—	Grommet	Yes	3-wire (NPN equivalent)	—	5 V	—	Z76	—	●	●	—	—	IC circuit

						—	Y7BA	G5BA	—	●	○	○	—		
				4-wire (NPN)		5 V, 12 V	F59F	G59F	●	●	○	○	IC circuit		
						—	P5DW	—	—	●	●	○	—		

* Lead wire length symbols: 0.5 m.....Nil (Example) A54
3 m.....L (Example) A54L
5 m.....Z (Example) A54Z

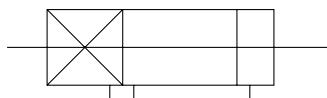

* Solid state switches marked with "○" are produced upon receipt of order.
• Since there are other applicable auto switches than listed, refer to page 9-7-26 for details.
• For details about auto switches with pre-wire connector, refer to page 9-15-66.

Cylinder with Lock Double Acting, Double Rod Series CNAW

JIS Symbol

Double acting,
Double rod

Made to Order Specifications (For details, refer to page 9-16-1.)

Symbol	Specifications
-XC14	Change of trunnion pivot bracket mounting position

Specifications

Bore size (mm)	40, 50, 63, 80, 100
Fluid	Air
Type	Non-lube
Action	Double acting
Lock operation	Spring locking
Proof pressure	1.5 MPa
Max. operating pressure	1.0 MPa
Min. operating pressure	0.1 MPa
Piston speed	50 to 1000 mm/s *
Ambient and fluid temperature	Without auto switch: -10 to 70°C (No freezing) With auto switch: -10 to 60°C (No freezing)
Cushion	Air cushion
Stroke length tolerance	Up to 250: $^{+1.0}_0$, 251 to 1000: $^{+1.4}_0$, 1001 to 1500: $^{+1.8}_0$
Mounting	Basic style, Axial foot style, Rod side flange style, Head side flange style, Center trunnion style

Note) Load limits exist depending upon piston speed when locked, mounting direction and operating pressure.

Data

Lock Specifications

Locking action	Spring locking (Exhaust locking)
Unlocking pressure	0.25 MPa or more
Lock starting pressure	0.20 MPa or less
Max. operating pressure	1.0 MPa
Locking direction	Both directions

Standard Stroke For cases with auto switches, refer to the table of minimum strokes for mounting of auto switches Table on page 9-7-21.

Bore size (mm)	Standard stroke (mm)
40	25, 50, 75, 100, 125, 150, 175, 200, 250, 300, 350, 400, 450, 500
50, 63	25, 50, 75, 100, 125, 150, 175, 200, 250, 300, 350, 400, 450, 500, 600
80, 100	25, 50, 75, 100, 125, 150, 175, 200, 250, 300, 350, 400, 450, 500, 600, 700

Stopping Accuracy

Lock type	Piston speed (mm/s)			
	100	300	500	1000
Spring locking	± 0.3	± 0.6	± 1.0	± 2.0

Condition: Lateral, Supply pressure P = 0.5 MPa

Load weight Upper limit of allowed value

Solenoid valve for locking mounted on the unlocking port

Maximum value of stopping position dispersion from 100 measurements

Holding Force of Spring Locking (Maximum static load)

Bore size (mm)	40	50	63	80	100
Holding force (N)	882	1370	2160	3430	5390

Series CNAW

Mounting Bracket Part No.

Bore size (mm)	40	50	63	80	100
Foot *	CA1-L04	CA1-L05	CA1-L06	CA1-L08	CA1-L10
Flange	CA1-F04	CA1-F05	CA1-F06	CA1-F08	CA1-F10

* When ordering foot bracket, order 2 pieces per cylinder.

Rod Boot Material

Symbol	Rod boot material	Max. ambient temperature
J	Nylon tarpaulin	70°C
K	Heat resistant tarpaulin	110°C *

* Maximum ambient temperature for the rod boot itself.

Accessory

Mounting		Basic style	Foot style	Flange style	Center trunnion style
Standard equipment	Rod end nut	●	●	●	●
	Clevis pin	—	—	—	—
Option	Single knuckle joint	●	●	●	●
	Double knuckle joint (With pin)	●	●	●	●
	With rod boot	●	●	●	●

* Dimensions are same as double acting, single rod type of Series CNA. (Refer to page 9-7-10.)

Weight

(): denotes the values for steel tube.

Bore size (mm)		40	50	63	80	100	(kg)
Basic weight	Basic style		1.84 (1.89)	2.93 (2.99)	4.34 (4.38)	7.76 (7.92)	11.50 (11.71)
	Foot style		2.03 (2.08)	2.97 (3.01)	4.68 (4.72)	8.43 (8.59)	12.49 (12.70)
	Flange style		2.21 (2.26)	3.20 (3.24)	5.13 (5.17)	9.21 (9.37)	13.42 (13.63)
	Trunnion style		2.29 (2.39)	3.28 (3.38)	5.23 (5.43)	9.46 (9.75)	13.90 (14.29)
Additional weight per each 50 mm of stroke	Aluminum tube	Mounting bracket	0.30	0.40	0.50	0.71	0.92
	Steel tube	Mounting bracket except trunnion	0.35	0.47	0.55	0.89	1.15
		Trunnion style	0.44	0.58	0.77	1.06	1.35
Accessory bracket	Single knuckle joint		0.23	0.26	0.26	0.60	0.83
	Double knuckle joint		0.32	0.38	0.38	0.73	1.08
	Knuckle pin		0.05	0.05	0.05	0.14	0.19

Calculation: (Example) CNAWLN-40-100-D • Base weight 2.03 (Foot, ø40)

• Additional weight 0.03/50 strokes

• Cylinder stroke 100 strokes

2.03 + 0.30 x 100/50 = 2.63 kg

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted.
For detailed specifications, refer to page 9-15-1.

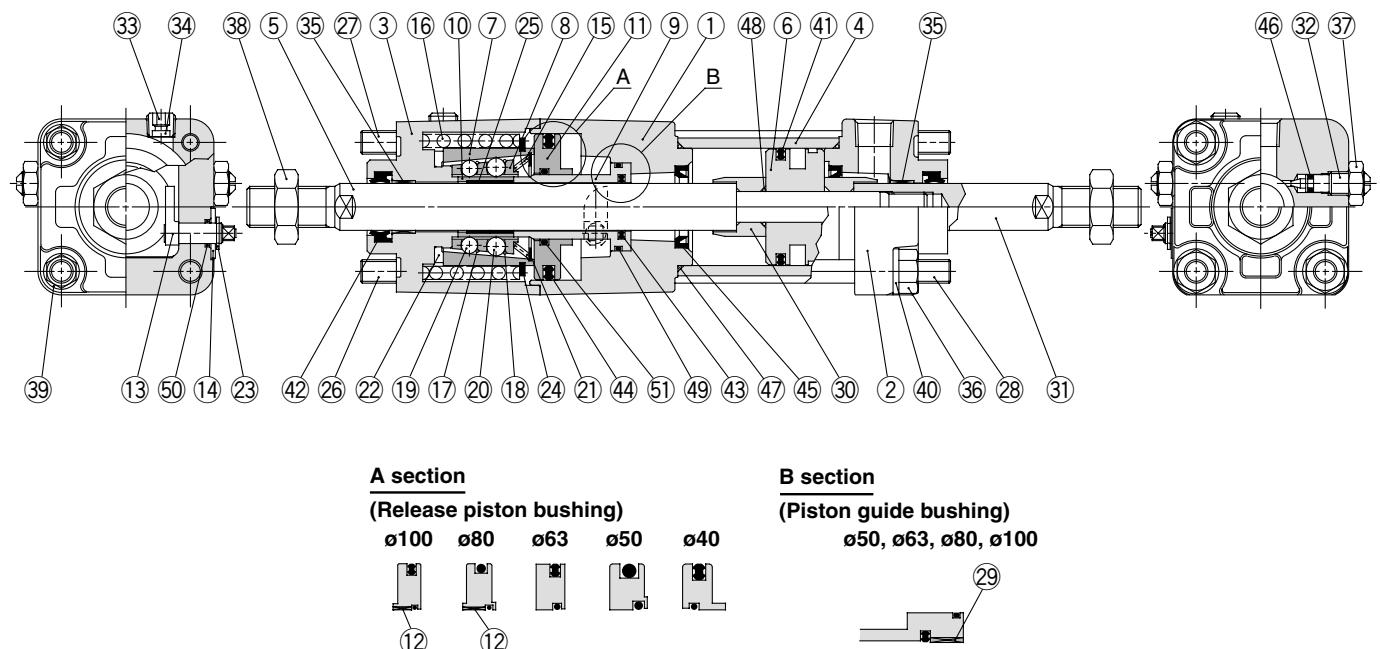

Type	Model	Electrical entry (Fetching direction)	Features
Reed switch	D-A53/A56	Grommet (In-line)	—
	D-A64/A67		Without indicator light
	D-Z80		—
Solid state switch	D-F59/F5P/J59	Grommet (In-line)	—
	D-F59W/F5PW/J59W		2-color indication type
	D-F5BAL		2-color indication type, Water resistant
	D-F5NTL	Grommet (Perpendicular)	With timer
	D-G5NTL		—
	D-Y69A/Y69B/Y7PV		2-color indication type
	D-Y7NWV/Y7PWV/Y7BWV		

* With pre-wire connector is available for solid state auto switches. For details, refer to page 9-15-66.

* Normally closed (NC = b contact), solid state switch (D-Y7G/Y7H type) are also available. For details, refer to page 9-15-40.

Cylinder with Lock Double Acting, Double Rod Series CNAW

Construction

Component Parts

No.	Description	Material	Note
①	Rod cover	Aluminum alloy	Black painted after hard anodized
②	Rod cover	Aluminum alloy	Black painted
③	Cover	Aluminum alloy	Black painted after hard anodized
④	Cylinder tube	Aluminum alloy	Hard anodized
⑤	Piston rod A	Carbon steel	Hard chrome plated
